

# Create Database:

## Step 1:

The screenshot shows the Cloudant dashboard with the 'Create Database' modal open. The modal has a 'Database name' field with the value 'database-name' and a 'Partitioning' section with two options: 'Non-partitioned - recommended for most workloads' (selected) and 'Partitioned'. There is a 'Which should I choose?' link below the partitioning options. At the bottom of the modal are 'Cancel' and 'Create' buttons. The background shows the 'Databases' table with columns: Name, Size, # of Docs, and Partitioned. The status bar at the bottom indicates 'Showing 1-0 of 0 databases'.

Name	Size	# of Docs	Partitioned
------	------	-----------	-------------

## Step 2(DB Created):

The screenshot shows the Cloudant dashboard with the 'sample-db' created. The 'Databases' table now has one row with the following data:

Name	Size	# of Docs	Partitioned	Actions
sample-db	0 bytes	0	No	  

The status bar at the bottom indicates 'Showing 1-1 of 1 databases. Databases per page 20'.
